Eureka Slough's future

EUREKA — Join Aldaron Laird at Freshwater Farms Reserve (5851 Myrtle Ave.) on Saturday at 11 a.m. to explore the historical implications of tideland reclamation and the future of the Eureka Slough landscape with sea-level rise and subsidence on Humboldt Bay. Laird is the adaptation planner for the Humboldt Bay Sea-Level Rise Adaptation Planning project. He recently completed a shoreline inventory, mapping and sea-level rise vulnerability assessment project.

Potential inundation maps of the Eureka Slough landscape will be presented and a discussion on what is at risk and what adaptation options may be feasible will be followed by a walk along Freshwater Slough to observe a high tide of more than 8 feet.

For more information, call Debbie Marshall at 822-2242.
